

NATURAL MINERAL EYE SHADOWS

Components: titanium dioxide, zinc oxide, mica and natural mineral pigments like ultramarine blue (from the gemstone lapis lazuli), chromium oxide blue (an earth metal), and carmine (a natural red colourant).

It is non-irritating, and doesn't contain any preservatives, parabens, mineral oils, chemical dyes, or fragrances, which are the primary causes of skin irritation, and allergic reactions.

Eye shadow adds depth and dimension to your eyes, complements the eye colour and draws attention to them. Remember that your eyes are the first thing people notice about your face. They should sparkle and look amazing.

Eye shadow can be applied in a variety of ways depending upon the desired look. Try different colours, you may be pleasantly surprised by a colour that you did not think would suite you. This eye shadow has **light reflecting properties** due to its mineral content, creating a brighter and luminescent glow.

Select darker shadows for the night and lighter ones for the daytime hours. Lighter colours make your eyes look bigger.

NOTHING ENHANCES THE NATURAL BEAUTY OF THE EYES BETTER THAN EYE SHADOW.

MINERAL EYE SHADOWS

are available in a variety of colours:

sunshine gold, dusty rose, pearl grey, azure, olive, sunshine mocha, rich coral, forest green, copper, and gunmetal violet

Eye shadows come in a clear 8ml container with a sifter for easy application. To apply it, you can use your finger or a small sponge applicator.

Mineral eye shadow can be applied dry or wet. The wet usage gives you a deeper and more intense colour.

It can also be mixed with Vaseline, to give your lips a shiny gloss. At the same time you can mix different shades to achieve the desired look.

Blue eyes –will look fantastic with lilac, pink, green, pale brown and gold.

Green eyes – look great with brown, rust, green, and soft colours.

Brown eyes – work well with most of the colours, avoid pastel shades.
